 Pixel level brightness and chroma calibration

Work with NovaLCT and NovaStar calibration software to support brightness and chroma calibration on each LED, which can effectively remove color discrepancies and

- greatly improve LED display brightness and chroma consistency, allowing for better image quality. The function of displaying image on screen for test is also supported.
- Multiple operation modes
 Control the device as you wish via
 V-Can, NovaLCT or device front panel knob and buttons.

• Free layout

The receiving card that is left blank is not calculated, and the constraint of rectangular load capacity calculation is eliminated. The used loading capacity is calculated according to the cabinets that are actually loaded.
